

Satellit TV providers should be REQUIRED to provide the consumer who is in a Grade-C or higher Local TV Signal area and the Local Area DMA Networks are not available on satellite service, with at least the DMA Networks NEXT DOOR TO THE DMA BROADCAST AREA that is not available or not cooperating with the satellite provider to carry the Local Network Programming. The DISTANT BROADCAST IS ok for National Network reception for some consumers but :for example: Denver Broadcasts DO NOT DO SOUTH WEST TEXAS consumers any good for Weather or Local Information, at least with the Next Door DMA Network Rural consumers could get programming near or exact to their location and area conditions. IE: KIMBLE,EDWARDS,SUTTON Counties Texas should be able to elect to receive San Antonio TV stations as Both Major Satellite Providers provide them in the San Antonio DMA now!

This Request for Action has also been forwarded to the Office Of Our Local Congressman.

A Positive reply from the FCC on the matter would be greatly appreciated.

Cordially,

Mr. D.Wheeler
